

FOR MEMBER OF THE CITY COUNCIL

Katherine Enos

Occupation: Small Business Owner

I grew up in Albany, graduated from UC Berkeley with a BA in American History, and then studied film theory and practice at SFSU. I lived and worked in the Berkeley Students Co-ops and remain a proponent of self-governing cooperatives. I believe government should express a generosity of spirit and strive to be open and anti-authoritarian. I believe inclusivity is founded on pluralism, freedom of choice, and separation of church and state. I am the founder of Context By Signal (contextbysignal.com), a web service offering wireless network analysis from an environmental perspective. My interests include ensuring that the voices of home owners and tenants can be heard, whether by increased opportunities for discussion or meaningful processes for feedback and complaint. I would like to talk about housing speculation and how we can minimize the price of housing for future generations. Local codes should be updated for the digital era including standards for privacy and encroachment. We should talk about the impact of wireless tech on the residential "noise floor" and how tech coexists with older homes using traditional infrastructure. Local government matters nationally. I'd like to ensure the block coordinator program is democratic and has appropriate oversight.
